            title:          "My First Laptop!"
            review_text:    "I've always been a fire tablet and desktop user and was looking
                            for a laptop so I could starting writing. For the price this is
                            a great laptop. It's very durable and not flimsy. The outside
                            and inside feel is strong and smooth. I went with this
                            chromebook instead of a Windows based one because it has
                            everything I wanted and was affordable to me. Overall I am happy
                            with this laptop and have ordered a second one for my gf!"
